GUTTER PROTECTION  
Specialists

## About Us

Leaf Shield has been installing Premium Australian gutter guards since 1995. We are a family owned business providing personalised before and after sales service. If you choose Leaf Shield we promise to install the most appropriate gutter guard product for your specific problem.

## How Does Leaf Shield Work

Leaf Shield fits on practically any type of roof and prevents leaves, balls and other debris blocking your gutters, down pipes and underground drains. The Leaf Shield system uses a fitting method that creates a "ski slope", so leaves, gum nuts and other debris are able to blow or roll off.

**"Thanks Leaf Shield you did a very professional job and it is working very well with plenty of leaves hitting the ground now instead of clogging the gutters."** -Lynn and Geoff

## The Leaf Shield System

Regardless of the type of roof our qualified Leaf Shield fitters can customise the fitting to suit any situation. (See diagrams below).

## WPH&S

Workplace Health and Safety is extremely important to us at Leaf Shield. Our experienced installers are proficient in working at heights. They have all completed at least one safety induction course and hold blue or white cards. Keeping up to date with Workplace Health and Safety law is of the utmost importance. SWMS and JSA are available on request.

	<b>Free gutter clean with every installation!</b>	Leafmesh is designed for maximum water collection and strong enough to stop medium to large leaves, twigs and birds from entering your gutters and roof.	Fine Leafmesh is perfect for fine leaves such as Jacarandas, fine pine needles and improved tank water.  *additional charge for colours.	Diamond Aluminium mesh is a zero fire rated mesh. Made available to comply with some council fire requirements.  Guttermesh is a lighter weight Leafmesh, suitable for some small leaf situations.

Leafmesh® is manufactured exclusively for Leaf Shield, by Tapex P/L in Kingsgrove Sydney. Tapex has been manufacturing in Sydney since 1880.

Premium Australian Leafmesh has a life expectancy of at least 20 years.

Its diamond pattern is the most effective in keeping debris out and letting water through. 900gsm has proven to be the most effective weight for maximum water collection.

It will not rust or cause electrolysis and is flexible enough to mould to the contour of your roof, making it self-cleaning in most situations.

## Our Customers Include:

QBuild, Councils, Builders (Commercial and Residential), Home Owners, Real Estate Agents, Body Corporates, Child Care Centres, Nursing Homes, Universities and Schools.

Call today to arrange a Free Measure & Quote from an experienced gutter guard specialist.
